EVALUATION & TREATMENT OF SHOULDER INJURIES w/ Brian Utting

Learn processes and specific techniques that are essential and successfully used on the most injured, most painful, most recalcitrant shoulders. Exercises are designed to build strength and function in both patterns and movement. All exercises are based on integrated function in the shoulder girdle and cervical spine. Participants will learn the 4 stages of evaluation and treatment. A lab session will occur weekly.

By taking this course, you will learn the principles of integration in the upper quadrant, the value of functional movement and specific exercises, and how to achieve patient compliance. You will return to your practice and be able to help your clients tremendously.
